

**NAME**

tag – add ID3v2 metadata to .wav(e) files

**SYNOPSIS**

**tag** [*datafile* [*infile* [*outfile*[/]]]]

**DESCRIPTION**

Add metadata in the ID3v2 format to the content of *infile* and store the result in *outfile*. If *outfile* is followed by a slash (/), application-specific metadata is omitted. The IDv3 metadata is provided via *adatafile*, where each line consists of an ID3 frame ID followed by a single space and the actual information, for example:

```
TIT2 Explosion
TALB Kapitulation
TPE1 Tocotronic
TYER 2007
```

Currently, only text-information frames, whose frame IDs start with "T", are supported. Existing IDv3 metadata is overwritten. Filenames default to **meta.dat**, **/dev/stdin**, and **/dev/stdout**. The dash (-) is a shorthand for the default value. If *outfile* is followed by a slash (/), application-specific metadata is omitted.
