

NAME

tz play – generate and play sound fragments

SYNOPSIS

tz play [*infile* [*outfile*]]

DESCRIPTION

Convert *infile* to *outfile* if necessary and play it using **xdg-open**. Only WAVE, AIFF, MP3, and ASCII files (with **tz mel** or **tz guitar** input) are supported. This is a simple wrapper program added for convenience. Filenames default to **/dev/stdin** or **/dev/shm/tmp.wav**. The dash (-) is a shorthand for the default value.
